

MEDTECH AND INSTRUMENTATION

WE UNDERSTAND YOUR NEED FOR:

- NPI, system integration and testing
- Global manufacturing facilities
- Certification, testing and verification
- Value analysis & engineering
- Meeting quality standard

HELPING YOU HELP OTHERS

PartnerTech has a long history of success in the medical device and medical technology industry. We can help you develop and manufacture equipment and instruments that meet the rigorous regulatory standards in Europe, Asia and the United States. With a global network of manufacturing facilities PartnerTech can help you reach your market faster.

PartnerTech's role with its customers is to provide production expertise and take an integrated approach. This role requires the ability to manage the entire life cycle, along with leading-edge skills in machining, enclosures and systems integration.

PartnerTech development team can help to analyze and develop your pro-

ducts to generate product improvements and make the NPI process easier. This is often done with a PartnerTech tool, Value Analysis/Value Engineering. VA/VE involves an overview of a product in order to make it as cost-effective as possible and optimize it for production. Regardless of production method, PartnerTech meets all requirements for safety, traceability and quality while offering specialist expertise such as handling fluids in very small quantities, acquired through previous collaboration.

PartnerTech's many years of experience and thorough familiarity with the market are valuable for businesses that commercialize new discoveries and concepts.

ACCREDITATIONS AND STANDARDS

- ISO 9001
- ISO 14001
- ISO 13485
- QSR (USA)
- PAL (Japan)
- MDD (Europe)
- IVDD (Europe)

MANUFACTURED PRODUCTS

Blood analysis equipment, radiology, anaesthesia machines and modules, mechanical heart, compressions systems, dialysis equipment, allergy testing equipment, DNA analysis equipment, prostate treatment equipment and general laboratory equipment.
